Company Profile 2026

Autonomous aircraft and the software that flies them.

Artemis UAV develops integrated autonomous systems: airframes, flight control, onboard AI and mission software.

Founded	Product families	Web
2024	**Six**	**artemisuav.com**

Executive overview

An autonomous systems company, from airframe to mission software

Artemis UAV develops autonomous systems end to end: hardware, flight control, onboard AI and the mission software that connects them. One shared software base runs across our product range for defense, security and industrial operations.

Core technology

In-house flight control, onboard computer vision and fleet management software.

Applications

Defense, security and industrial operations, from site surveillance to counter-drone response.

Customer evidence

Systems developed for defense, law enforcement, government and commercial clients.

Advantage

Every layer is developed in house and configured for each mission.

Founded

2024

Product families

Six

Clientele

Pakistan Army, Punjab Traffic Police, Punjab Department of Fisheries, Multi Business Solutions

Production

Built to order, configured per mission

Problems and applications

What our systems solve, and where each platform is used

The problems

Manual flight does not scale

Each piloted drone needs its own operator, limiting how many sites a team can cover.

Periodic patrols leave gaps

Scheduled inspections miss what happens between visits.

Aerial threats move fast

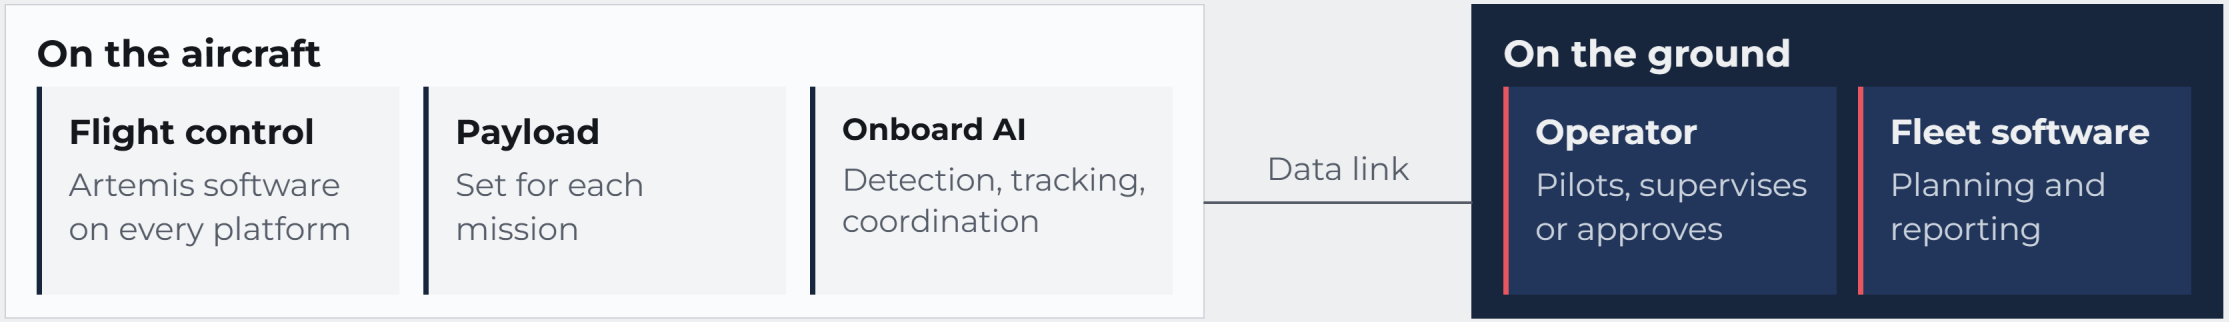

Small hostile drones need a quick, controlled response.

Where each platform is used

Platform	Defense	Security	Industrial
Drone-in-a-Box	✓	✓	✓
Long-Range VTOL	✓		✓
AI Interceptor	✓	✓	
Mortar Dropping Drone	✓		
Kamikaze FPV	✓		
Swarm Drones	✓		

Technology platform

One in-house stack, applied differently on each platform

Platform	Flight	Onboard AI	Operator
Drone-in-a-Box	Automatic dock launch; autonomous patrol	Anomaly detection	Approves any response
Long-Range VTOL	Vertical take-off; autonomous route flight	Flags leaks, heat and damage	Reviews findings
AI Interceptor	Vertical launch; AI-assisted pursuit	Target detection and tracking	Approves every response
Mortar Dropping Drone	Artemis flight control with mission logging	Release-point estimation	Commands every release
Kamikaze FPV	Operator-piloted over an FPV video link	Optional AI assistance	Pilots throughout
Swarm Drones	Auto launch; decentralized formation flight	Shared task assignment	Sets the mission

Data link, sensors and payload are configured per platform and mission.

Product portfolio

Six product families on one in-house software base

Drone-in-a-Box

Unattended site patrol from a dock

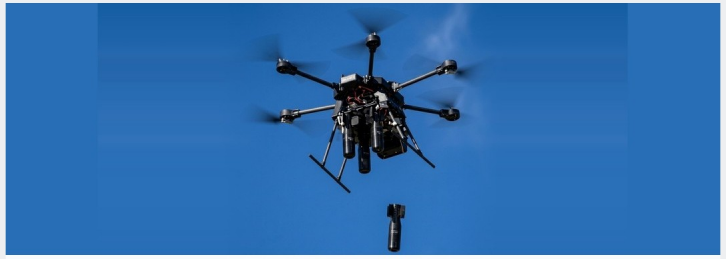

Long-Range VTOL

Corridor inspection over long distances

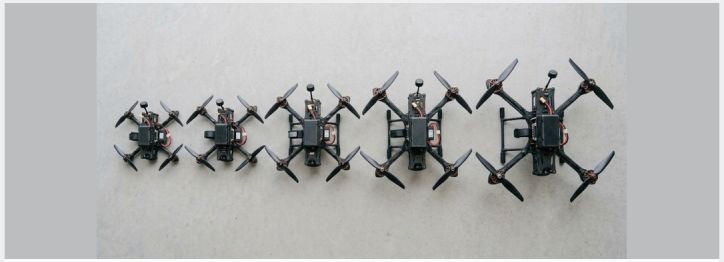

AI Interceptor

Fast response to hostile drones

Mortar Dropping Drone

Heavy-lift multirotor with payload release

Kamikaze FPV

Operator-piloted FPV, 5 to 15 inch

Swarm Drones

Coordinated flight of many drones

Flagship product

AI Interceptor Drone

A vertical-launch, rocket-style interceptor built for fast response to hostile drones.

Mission: Counter-drone response and protection of perimeters and sensitive sites.

Specifications

Top speed	**Up to 280 km/h**
Flight time	**Up to 20 min**
Airframe	**Vertical launch, 4 rotors**
Camera	**Analog FPV**
Guidance	**AI-assisted tracking**
Control	**Operator-approved**

Capabilities

AI-assisted detection and tracking. Low-latency analog video. Launches without a rail or runway. An operator approves every response.

Maximum values; they depend on payload, weather and configuration.

Flagship product

Drone-in-a-Box

A self-contained dock that launches, recovers and recharges its drone for unattended patrols.

Mission: Persistent surveillance of fixed sites for defense, security and industry: bases, perimeters, plants and compounds.

Specifications

Flight endurance	**Up to 45 min**
Cruise speed	**Up to 70 km/h**
Range	**Up to 30 km by radio; further over 4G**
Cameras	**Daylight, thermal, night vision**
Navigation	**Waypoint**
Docking	**Automatic**
Propulsion	**Electric**

Capabilities

Automatic launch, landing and docking. AI anomaly detection with track and trace. Connects to existing site systems. Routine patrols run without input; an operator approves any response.

Maximum values; they depend on payload, weather and configuration.

Flagship product

Long-Range VTOL Drone

A fixed-wing VTOL aircraft that takes off vertically and cruises efficiently over long distances.

Mission: Long-range surveillance for defense, and inspection of pipelines, power lines and corridors, from sites with no runway.

Specifications

Range	**Up to 150 km**
Flight time	**Up to 1.5 h**
Cruise speed	**Up to 160 km/h**
Airframe	**Fixed-wing VTOL, V-tail**
Take-off and landing	**Vertical, no runway**
Cameras	**Normal, thermal, zoom, analog FPV**

Capabilities

Autonomous route flight. AI flags leaks, hot spots, intrusions and damage for the operator. Interchangeable camera payloads.

Maximum values; they depend on payload, weather and configuration.

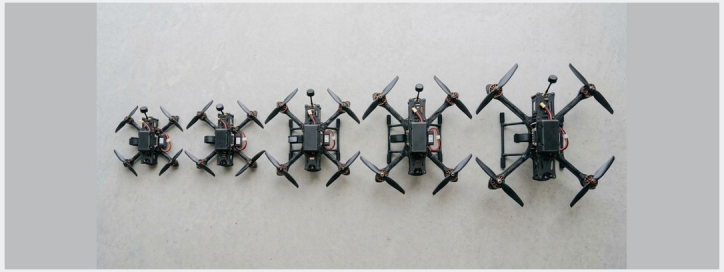

Additional platforms

Defense-focused aircraft built on the same flight software

Mortar Dropping Drone

Airframe	**Hexa or quad, per mission**
Payload	**Mortar rounds, caliber on request**
Flight time	**Up to 40 min**
Altitude	**Up to 1,000 m**
Speed	**Up to 80 km/h**
Release	**AI-estimated, operator-commanded**

Kamikaze FPV Drone

Frame size	**5 to 15 inch**
Flight time	**20 to 40 min**
Payload	**0.3 to 3 kg**
Max speed	**40 to 120 km/h**
Video	**FPV, low latency**
Control	**Operator-piloted**

Swarm Drones

Formation	**Up to 45 drones**
Modes	**Line, pincer, saturation**
Autonomy	**Auto launch, formation flight**
Endurance	**Up to 45 min**
Max speed	**Up to 80 km/h**
Payload	**Up to 1 kg per drone**

Maximum values; they depend on payload, weather and configuration.

Case study

AI Interceptor for the Pakistan Army

Client

Pakistan Army

Requirement

Fast response to hostile drones around military sites.

What we developed

The AI Interceptor: a vertical-launch counter-drone aircraft with AI-assisted tracking and low-latency analog video.

How it is operated

An operator approves every response; the AI assists with detection and tracking.

Stage

Field-tested

Previous projects

AI and embedded systems built for public and commercial clients

Punjab Traffic Police

AI Driving Test Car

Need: Objective, tamper-proof driving tests.

Built: A 360° camera test vehicle. AI detects driving faults in real time and verifies the candidate by face and biometrics.

Punjab Department of Fisheries

Smart Aquaculture

Need: Protecting & monitoring shrimp growth through water quality.

Built: Real-time monitoring of TDS, temperature, dissolved oxygen and salinity on shrimp farms.

Multi Business Solutions

Smart Greenhouse

Need: Stable growing conditions with less manual work.

Built: Automated monitoring and control of temperature, humidity and soil moisture.

Manufacturing and support

From build to long-term operation

Manufacturing

Every unit is built to order. Lead times are confirmed with each order.

Customization

Airframe, payload and software adapted to the customer’s mission.

Integration

Connection to existing site and command systems.

Software updates

AI model and autonomy updates across the fleet.

Maintenance

Upgrades, servicing and repairs after delivery.

Training

Operator training for the customer’s own team.

What sets us apart

Every layer of the system is our own

Airframe	Designed by Artemis for each mission profile.	**In house**
Flight control software	Our own control software, tuned to our airframes.	**In house**
Onboard AI and vision	Our own models for detection and tracking.	**In house**
Mission and fleet software	Our own planning, scheduling and reporting.	**In house**

Integrated design

Airframe and flight control are developed together and tuned as one system.

Mission-specific configuration

Airframe, payload and software are set up for each customer's task.

Cross-platform reuse

The same software base carries over to every product family.

Leadership

The founding team covers autonomy, AI, software and operations

Umair Idrees

Chief Executive Officer

AI and autonomy, flight systems, product direction

Yazman Mahmood

Chief Operating Officer

Software engineering, business strategy, operations

Fasih Tariq

AI Lead

AI model development, computer vision, off-grid systems

Hamza Ali

Sourcing and engineering support

Management, sourcing, engineering support
