Artemis UAV
Edition **2026**

Product catalogue

Autonomous drone systems for security, defense and critical infrastructure, built on one in-house autonomy stack.

About Artemis	02
Drone-in-a-Box	03
Long-Range VTOL Drone	04
AI Interceptor Drone	05
Mortar Dropping Drone	06
Kamikaze FPV Drone	07
Swarm Drones	08
Track record	09
Services	10

We design and build autonomous drones, and the AI that flies them.

Artemis UAV makes AI-native drone systems for security, defense and critical infrastructure. Our range covers docked inspection drones, long-range VTOL aircraft, interceptors and coordinated swarms.

Every platform runs on the same in-house stack of AI perception, flight control and fleet software. The aircraft change to fit the mission; the intelligence stays the same, and a human operator stays in charge. Every drone is built to order and configured for the customer's mission.

up to **100** assets supervised by one operator	**24/7** persistent autonomous coverage	**6** platforms on one autonomy stack

The stack, top to bottom

04	**Human in the loop**	Routine flights run on their own. An operator approves any response to an alert.
03	**Fleet & mission management**	Scheduling, multi-site operations and reporting.
02	**AI perception & autonomy**	AI models, computer vision and autonomy algorithms.
01	**Flight control**	In-house control software and flight systems.

Drone-in-a-Box

Persistent surveillance and rapid response from a self-contained dock, built to run around the clock.

up to **45 min**	up to **70 km/h**	up to **30 km**	**24/7**
flight endurance	cruise speed	range · unlimited via 4G	operation

The dock launches, recovers and recharges its drone with no one on site. It flies scheduled patrols or answers alerts on demand, and connects to the infrastructure a site already runs.

- Auto launch, auto land and auto docking
- AI anomaly detection with track & trace
- Waypoint navigation for repeatable routes
- Works with existing site systems

Used for perimeter security, area surveillance, critical infrastructure monitoring, routine inspections.

Specifications

Docking	Auto docking
Propulsion	Electric
Navigation	Waypoint
Cameras	Daylight / thermal / night vision
Communication	Up to 30 km, unlimited via 4G
Integration	Existing infrastructure
Readiness	24/7 operation

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

Long-Range VTOL Drone

Takes off like a multirotor, cruises like an aircraft. Made for pipelines, power grids and long corridors.

up to **150** km range	up to **1.5** hours flight time	up to **160** km/h cruise speed	**4** camera options

Vertical take-off means no runway and no launcher, so it can operate from small, remote sites. Once airborne it flies its route autonomously while Artemis AI flags leaks, hot spots, intrusions and damage for the operator to review.

- Vertical take-off and landing
- Efficient fixed-wing cruise, V-tail layout
- Interchangeable camera payloads
- Findings sent to site teams as work orders

Used for pipeline patrol, power-line and grid inspection, corridor mapping.

Specifications

Airframe	Fixed-wing VTOL, V-tail
Range	Up to 150 km
Flight time	Up to 1.5 hours
Speed	Up to 160 km/h
Take-off / landing	Vertical, no runway
Cameras	Normal, thermal, optical zoom, analog FPV

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

AI Interceptor Drone

A fast, AI-assisted interceptor for perimeter security and response to aerial threats.

up to **230** km/h	up to **20** min	**Analog**	**AI**
top speed	flight time	FPV camera	assisted tracking

A vertical-launch, rocket-style airframe built for speed. It pairs Artemis AI perception with a low-latency analog video link, so security teams can respond quickly to intrusions and unauthorised drones around sensitive sites.

- Speeds of up to 230 km/h
- AI-assisted detection and tracking
- Vertical launch, no rail or runway
- Operator approves every response

Used for perimeter security, counter-drone response, critical site protection.

Specifications

Airframe	Vertical launch, 4 rotors
Top speed	Up to 230 km/h
Flight time	Up to 20 min
Camera	Analog FPV
Guidance	AI-assisted tracking
Control	Operator-approved

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

Mortar Dropping Drone

Heavy-lift multirotor that carries mortar rounds and releases them on operator command.

up to **40** min flight time	up to **1,000** m operating altitude	up to **80** km/h speed	**6 / 4** rotors, hexa or quad

A heavy-lift multirotor offered in hexacopter or quadcopter configuration, depending on payload and mission. Rounds are carried in a rack beneath the airframe and released only when the operator commands it.

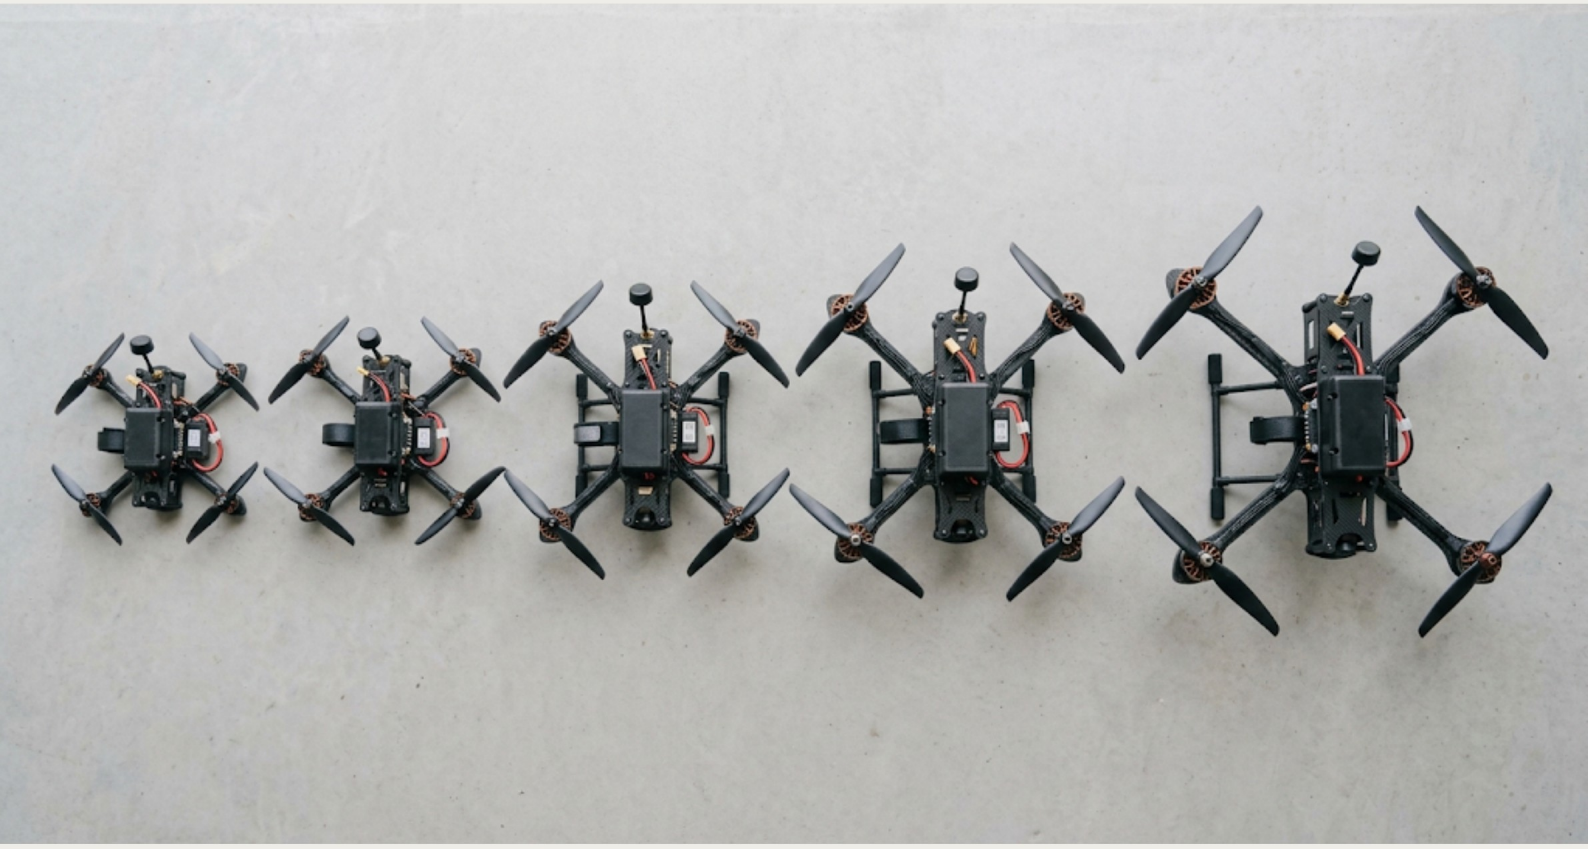

- Operator approves every release
- Hexa or quad build to suit the mission
- Quick-load payload rack
- Artemis flight control and mission logging

Used for defense forces.

Specifications

Airframe	Hexa or quad, per use case
Payload	Mortar rounds, calibre on request
Flight time	Up to 40 min
Operating altitude	Up to 1,000 m
Speed	Up to 80 km/h
Release	Operator-commanded

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

Kamikaze FPV Drone

One FPV family, five to fifteen inches, so the airframe can be matched to the job.

5–15 inch	**20–40** min	**0.3–3** kg	**40–120** km/h
frame size	flight time	payload	max speed

Every size in the range runs on Artemis in-house flight control and is flown by a trained operator over a live first-person video link. Smaller frames are quicker and lighter; larger frames fly longer and carry more.

- Frame sizes from 5 to 15 inches
- Low-latency first-person video
- Artemis in-house flight control
- Operator-piloted on every mission

Used for defense and security forces.

Specifications

Frame sizes	5 to 15 inch
Video	FPV
Control	Operator-piloted
Flight time	20 to 40 min
Payload	300 g to 3 kg
Max speed	40 to 120 km/h

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

Swarm Drones

Many drones, one mission. Coordinated flight driven by decentralized swarm intelligence.

up to **45** drones	up to **45** min	up to **80** km/h	up to **1** kg
in one formation	flight endurance	max speed	payload per drone

The drones launch automatically, form up and share the work between them. Because the intelligence is spread across the group, there is no single point of failure; each drone coordinates with the others to split tasks.

- Decentralized swarm intelligence
- Collaborative target assignment
- Auto launch and formation flight
- Line, pincer and saturation modes

Used for wide-area coverage and defense operations.

Specifications

Formation size	Up to 45 drones
Formation modes	Line / pincer / saturation
Autonomy	Auto launch & formation flight
Flight endurance	Up to 45 min
Payload	Up to 1 kg
Max speed	Up to 80 km/h

Built to order, not held in stock. Customisable to your requirements. Figures are maximum values and depend on payload and conditions.

Delivered & proven.

From the battlefield to public services, Artemis UAV has engineered and delivered AI-driven systems for defense, law-enforcement and government departments.

01

5 Corps, Karachi

AI Interceptor

Counter-UAV interceptor developed for high-speed neutralization of hostile drones, providing rapid response against aerial threats.

02

Punjab Traffic Police

AI Driving Test Car

Test vehicle fitted with cameras for full 360° coverage. AI detects cone collisions and driving faults in real time, with biometric and facial-recognition candidate verification to prevent impersonation.

03

Punjab Department of Fisheries

Smart Aquaculture

Real-time water-quality monitoring for shrimp farms, tracking TDS, temperature, dissolved oxygen and salinity to protect stock and improve yield.

04

Multi Business Solutions

Smart Greenhouse

Automated monitoring and control that keeps temperature, humidity and soil moisture at target levels for consistent, efficient growing.

After the drone lands.

We stay with every fleet after delivery, with software, support and people who know how to fly it.

1 **Built to order**
Every drone is manufactured to order and configured for your mission. Units are not held in stock; lead times are confirmed with each order.

2 **Customisation**
Airframe, payload and software configured to your use case on our in-house stack.

3 **Software & autonomy**
AI models, control software and ongoing autonomy updates across the fleet.

4 **Fleet & mission management**
Scheduling, multi-site operations and reporting from one control layer.

5 **Integration & support**
Hook-up to your existing systems, plus maintenance, upgrades and repairs.

6 **Training & certification**
Operator training and certification that builds drone skills in-house.
